

The ideal deck is **7–8 slides per website**.

Recommended Structure for ALL 3 Website Presentations

1. THE CORE IDEA

“What is the creative thought behind this website?”

Cover:

- Central design concept
- Inspiration behind the direction
- What the website is intended to make the user feel
- One-line design philosophy
- The key problem this concept solves

This should be the strongest opening slide.

2. VISUAL CONCEPT & DESIGN LANGUAGE

“How did we translate the idea into a visual experience?”

Cover:

- Overall aesthetic
- Visual personality
- Design mood
- Layout philosophy
- Minimal / maximal approach
- Geometry, symmetry, asymmetry, whitespace
- Relationship between visual elements

Show a visual moodboard or selected website sections.

3. COLOUR SYSTEM

“Why these colours?”

Cover:

- Primary colours
- Secondary colours
- Background colours
- Accent colours
- Contrast strategy
- Colour psychology
- How the colours support the products/images

Show actual colour swatches and their application in UI.

4. TYPOGRAPHY & VISUAL HIERARCHY

“How typography creates the personality of the website.”

Cover:

- Primary font
- Secondary font
- Font weights
- Heading hierarchy
- Body text
- Letter spacing
- Typography scale
- CTA typography

Most importantly, explain **why this font belongs to this particular concept.**

5. IMAGE & ART DIRECTION

“Why these images and how are they being used?”

Cover:

- Image style
- Photography direction
- Architectural imagery
- Product imagery
- Close-ups / textures
- Human presence, if applicable
- Cropping
- Image scale
- Lighting and mood
- Relationship between image and typography

The key question:

Why does this image belong to this design concept?

6. UX / USER JOURNEY

“How the design guides the user.”

Cover:

- Navigation philosophy
- Information hierarchy
- Homepage journey
- Product discovery

- Collection browsing
- Product details
- Search/filtering
- CTA placement
- Enquiry journey

Visualise:

Discover → Explore → Understand → Select → Enquire

This is important because it proves the design isn't just aesthetic.

7. INTERACTION, MOTION & DIGITAL EXPERIENCE

“How the website behaves.”

Cover:

- Scroll behaviour
- Hover states
- Image transitions
- Page transitions
- Micro-interactions
- Product interactions
- Navigation animations
- Loading behaviour
- Mobile interactions

Explain **why each interaction exists**, not simply what animation was added.

8. THE EXPERIENCE / DESIGN RATIONALE

“Why this concept works.”

Summarise:

- What makes this concept distinctive
- What makes it visually memorable
- What makes it easy to use
- How it showcases the product
- How it creates the intended perception
- Why the overall system is coherent

End with one strong statement describing the concept.

So Your 3 Decks Become

WEBSITE CONCEPT 01

1. **The Core Idea**
2. **Visual Concept & Design Language**
3. **Colour System**
4. **Typography & Hierarchy**
5. **Image & Art Direction**
6. **UX & User Journey**
7. **Interaction & Motion**
8. **Why This Concept Works**

WEBSITE CONCEPT 02

Exactly the same structural framework, but all explanations are specific to Concept 02.

WEBSITE CONCEPT 03

Exactly the same framework, but specific to Concept 03.

One refinement I strongly recommend

Don't title the slides too technically.

Instead of:

“Colour Palette”

use:

“Colour as a Material Environment”

Instead of:

“Typography”

use:

“Typography Creates the Voice”

Instead of:

“Images”

use:

“Making Surfaces the Hero”

Instead of:

“UX Flow”

use:

“Designing the Journey From Inspiration to Enquiry”

Instead of:

“Animations”

use:

“Movement With Purpose”

This makes the presentation feel like **creative strategy and design thinking**, rather than a designer explaining UI components.

The overall storytelling should be:

**IDEA → VISUAL LANGUAGE → COLOUR → TYPE → IMAGERY → UX → MOTION →
RATIONALE**

That is the cleanest structure for presenting three separate website concepts professionally.
